

#2165 P4-2525 Features

The P4-2525 is a high-performance Panel Bender. As usual, its name reflects the dimensions of the largest panel it can produce, with the first two figures indicating the maximum bend length (2540 mm) and the last two the maximum bend height (254 mm).

The structure of the P4-2525 is such that it can cover an extremely wide range of market sectors, from catering to doors, elevators, HVAC and switchboards plus, of course, job shops, thanks to its enormous flexibility.

The machine can be equipped with options for making profiles and other high-quality, high-precision parts that would otherwise be difficult to produce on a Panel Bender.
